

## Comprehensive Solutions for Special Libraries

Infor's library and information management applications are used by a variety of special libraries that showcase particular collections or address the needs of specific users. Our customers include museums, archives, corporate libraries and libraries for the blind and visually impaired.

Using our solutions, special libraries can manage and showcase unique collections, such as paintings, newspapers or historical photographs. Libraries can also utilize the Web OPAC to create special views for specific groups of users. Through integrated tools for resource discovery, library users can access the Library's catalog, Internet resources and subscription databases to find relevant information in virtually any format.

### Our Solutions

**Vubis Smart**—integrated library system enables libraries to manage collections of any format

**V-spaces**— information portal and federated search solution enables users to find information in multiple resources through a single query

**V-link**—OpenURL Resolver provides users with links to context sensitive information in external resources

**V-sources**—e-resources management enables libraries to effectively manage the evaluation, selection, acquisition, implementation and administration of electronic resources

**V-insight**—statistical analysis portal provides libraries with key performance data and metrics

### Solution Highlights

- Scalable applications for small, medium and large institutions
- Support for multiple databases, formats and locations
- Support for standard data formats and protocols such as MARC21, UniMARC, Dublin Core, CDWA, XML, Unicode, OpenURL, OAI-PMH, Z39.50, SRU/SRW and many others
- Support for ISAD(G): General International Standard Archival Description
- Web OPAC with unique views for separate groups
- Multi-lingual support
- Dynamic management and presentations of digital collections
- Unique workflows for the delivery of digital, audio and Braille materials
- Interoperability with third-party software tools and applications such as Jaws (Braille), RealSpeak (speech software) and SuperNova (screen reader with magnification)

# Solutions for Special Libraries

## Collection Management

Using Vubis Smart, special libraries can easily create customized workflows and presentations. Digital collections can be created to present artwork or newspaper collections. Libraries for the blind can use Vubis Smart to ensure proper delivery and accessibility of Braille books or audio materials. Vubis Smart supports all prevalent data formats and protocols such as MARC21, UniMARC, Dublin Core, CDWA, XML, Unicode, OpenURL, OAI-PMH, Z39.50, SRU/SRW and many more.

## Resource Discovery

Through a highly flexible search and resource discovery environment with federated searching, OpenURL linking and a graphical Web OPAC, libraries provide users with instantaneous access to relevant information. Infor's V-spaces federated search and information portal enables libraries to provide their users a single interface to find information resources in multiple resources - such as Web sites and subscription databases - through a single query. The V-link OpenURL Resolver further extends the ability of users to find pertinent information; after conducting a search in the Web OPAC, users can refine their search and find additional material such as journals, movies, books and audio files.

## Libraries for the Blind and Visually Impaired

Serving large populations of visually impaired users, the libraries for the blind require special functionality to make materials readily available. Vubis Smart enables these libraries to easily circulate materials to thousands of users while using the latest standards in digitization and material processing. Libraries use Vubis Smart to enable an automated ('on demand') lending and materials (re)production process for materials in multiple formats; Vubis Smart supports the management of books, newspapers, magazines and sheet music in audio, Braille, enlarged or digitized reading formats. Integrated invoicing, catalog management, borrower administration, circulation, rights and service management further facilitate the seamless management of the library's operations. Vubis Smart also interfaces with third-party software tools and applications such as Jaws (Braille), RealSpeak (speech software) and SuperNova (screen reader with magnification).
