

Vubis Smart

Vubis Smart is a comprehensive information management system that offers libraries, archives and museums simple tools to organize and present multi-format data from different sources. Institutions use Vubis Smart to analyze and satisfy user needs while reducing processing time and curbing operational costs. Complex and simple data formats are easily defined and managed. With V-link, Infor's open URL resolver, institutions complete their service offerings by providing users with seamless access to external information resources.

- Intuitive Interface
- Patron Self-Service
- Comprehensive Reporting
- Robust Database
- Format Independence
- Circulation Module
- Cataloguing Module
- Acquisitions Module
- Serials Module
- Web OPAC Module

Discover The Possibilities

For users Vubis Smart features a dynamic Web OPAC that is powerful, feature-rich and easy-to-use. Users search databases of different formats such as community information databases, or bibliographic and digital collections. They can personalize searches and the user interface, view suggestions for subjects and authors, and receive alternatives for keywords that are not found.

With Vubis Smart we realize our vision to provide forward-looking and original solutions to today's information centers. Users enjoy a host of interactive features to manage their activities and to direct their searches. Institutions benefit from easy transactions and system stability. By utilizing Caché®, the especially robust post-relational database developed by InterSystems, Vubis Smart requires minimal database maintenance. With the Vubis Smart advanced client-server architecture, Infor support staff can effortlessly access data remotely in real-time to provide institutions with unfailing service and support.
